# Activity 1- Prototype

Above image shows outer and inner DIV positioning

Based on order of events -

1st page – Alphabet sequencing. As all alphabets won't fit to the screen, we can run these in 3 landing pages-

Page 1 – To have Alphabets – A B C D E F G H I

Page 2- J K L M N O P Q R

Page 3- S T U V W X Y Z

We will continue using the same story line -

Background example below-

 This page should display with an engine on rail track ..

Below this picture we should have all alphabets like A..B..C…D..E.. F Till Z in Carriage. Children will drag and drop the carriages in correct order -as per Alphabet Sequencing.

Outcome

Once children complete this activity it should say good job or well done (sound will be provided by us) and they can click on Next activity tab-

If the children are unable to match the correct carriages with alphabet the carriage should drop back to its original place and in third attempt, we can highlight the correct carriage so then they can drag and drop.
